

Issue focus coating

Tablet coater

SmartCoater tablet coater offers batch size flexibility—handling 100 to 700 liters (30 to 500 kilograms)—and applies coatings as fast as 200 grams per minute. Its standard baffles and flip arm adjust to coat batches that are 30 to 100 percent of capacity, while special baffles let you coat at 20 percent of capacity. Spray coverage is 5 percent compared with 25 percent in traditional coaters; machine also reduces processing time by as much as 60 percent. Schlick X-One anti-bearding nozzles with split configuration and central lock are easy to handle. They use form seals instead of O-rings, and you need no tools to clean or maintain them. User-friendly computer interface simplifies recipe management and documentation. Other features include WIP, option for sugar coating, and full access to drum for visual inspection and easy cleaning. Company also manufactures fluid bed equipment.
